

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, or claims in this application:

**Listing of Claims:**

Claim 1 (original): A downhole tool for use in a well bore, the tool comprising:

a tubular body having an axial throughbore and adapted for connection within a work string; a sleeve mounted around the body, the sleeve including one or more stabiliser blades, said stabiliser blades including one more jetting ports to direct fluid from the axial throughbore onto a surface of the well bore; and one or more actuating means to selectively direct the fluid through the jetting ports and thereby circulate the fluid.

Claim 2 (original): A downhole tool as claimed in Claim 1 wherein the one or more actuating means provides a cyclic on/off function.

Claim 3 (currently amended): A downhole tool as claimed in Claim 1 or 2 wherein the actuating means is selected from a group comprising ball activated, weight activated and hydraulically activated or a combination thereof.

Claim 4 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1 wherein the sleeve is threaded onto the body by a left-hand screw thread.

Claim 5 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1 wherein an outer diameter of the stabiliser blades on the sleeve are sized to be close to the inner diameter of the tubular in use.

1           Claim 6 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1  
2 wherein the stabiliser blades are arranged in a helical pattern around the sleeve.

3  
4           Claim 7 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1  
5 wherein the tool includes a triangular flow-by groove, between adjacent stabiliser blades.

6  
7           Claim 8 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1  
8 wherein each stabiliser blade has a central portion including a surface parallel to the axial  
9 throughbore, on which are arranged the one or more jetting ports.

10  
11           Claim 9 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1  
12 wherein the blades include a milling surface.

13  
14           Claim 10 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1  
15 wherein one or more of the jetting ports include a nozzle, located below an outer surface of  
16 the blade.

17  
18           Claim 11 (currently amended): A downhole tool as claimed in ~~any preceding~~ Claim 1  
19 wherein a channel is located between the body and the sleeve, accessed by the jetting  
20 ports.

21  
22           Claim 12 (original): A downhole tool as claimed in Claim 11 wherein the one or more  
23 actuating means selectively direct fluid from the axial throughbore to the channel.
